MONTHLY SUMMARY FOR NOVEMBER 1997

Oklahoma's statewide-averaged precipitation and temperature were both lower than normal in November. The average station received 1.72 inches of precipitation during the month, 0.70 inch less than normal, to rank this as the 46th driest November since 1892. Daily temperatures averaged 46 degrees across the state, 3.8 degrees lower than normal, to give 1997 the 14th coolest November on record.

Overall September through November statistics show that the state experienced a relatively cool, dry autumn. The statewide-averaged autumn temperature of 60.7 degrees, 0.9 degree lower than normal, ranks this as the 31st coolest autumn over a 106-year period. Accumulated precipitation, averaged across the state, for the three-month period was 8.83 inches which, although it was 0.60 inch less than normal, was the 50th greatest autumn precipitation recorded. Through eleven months, 1997 is the 28th wettest (35.78 inches of precipitation, 3.20 inches greater than normal) and the 13th coolest (61.2 degrees, 1.0 degree lower than normal) year in the state's recorded weather history.

Mild, dry weather dominated the state through the first week of November, although the dry was interrupted by early morning thunderstorms in eastern Oklahoma that produced hail in many areas and some heavy rains in the southeast, including 4.40 inches at Smithville (McCurtain County) and 2.48 inches at Cloudy Mesonet (Pushmataha).

Snow reached the Panhandle on the 9th with Boise City (Cimarron) reporting 2 inches. Heavier snow was reported in the northwest on the 11th and 12th, including 4.5 inches at Gate (Beaver), 4 inches at Kenton (Cimarron), 3.5 inches at Freedom (Woods), 3.1 inches at Guymon (Texas) and 3 inches at Boise City. A major intrusion of cold air poured into the state on the 14th and 15th. Snowfall reports included 4 inches each at Boise City and Range (Texas) on the 15th. Parts of southern Oklahoma received some light snow on the 15th, including reports of one inch at both Randlett (Cotton) and Hugo (Choctaw). Sub-freezing temperatures spread across the state on the 15th with Kenton and Boise City reporting single-digit daily minimum temperatures. On the 16th, Kenton Mesonet (Cimarron) recorded a low temperature of 7 degrees.

Mild weather returned for the remainder of the month, with daytime temperatures reaching the mid-70s across southern Oklahoma in the days just prior to Thanksgiving. Locally heavy rains fell in eastern Oklahoma on Thanksgiving Day (28th). Haskell (Muskogee) reported 2.76 inches of precipitation and 2.25 inches of rain fell at Westville and Stilwell (both in Adair County). Additional reporting stations recording over two inches of rain on the 28th were Miami (Ottawa), Dewar (Okmulgee), Broken Bow Mesonet (McCurtain), and Webbers Falls Mesonet (Muskogee).

NOVEMBER 1997 TOTAL PRECIPITATION
(INCHES)

NOVEMBER 1997 DEPARTURE FROM NORMAL PRECIPITATION
(INCHES)

NOVEMBER 1997 ACCUMULATED HEATING DEGREE DAYS
(°F)

NOVEMBER 1997 DEPARTURE FROM NORMAL HEATING DEGREE DAYS
(°F)

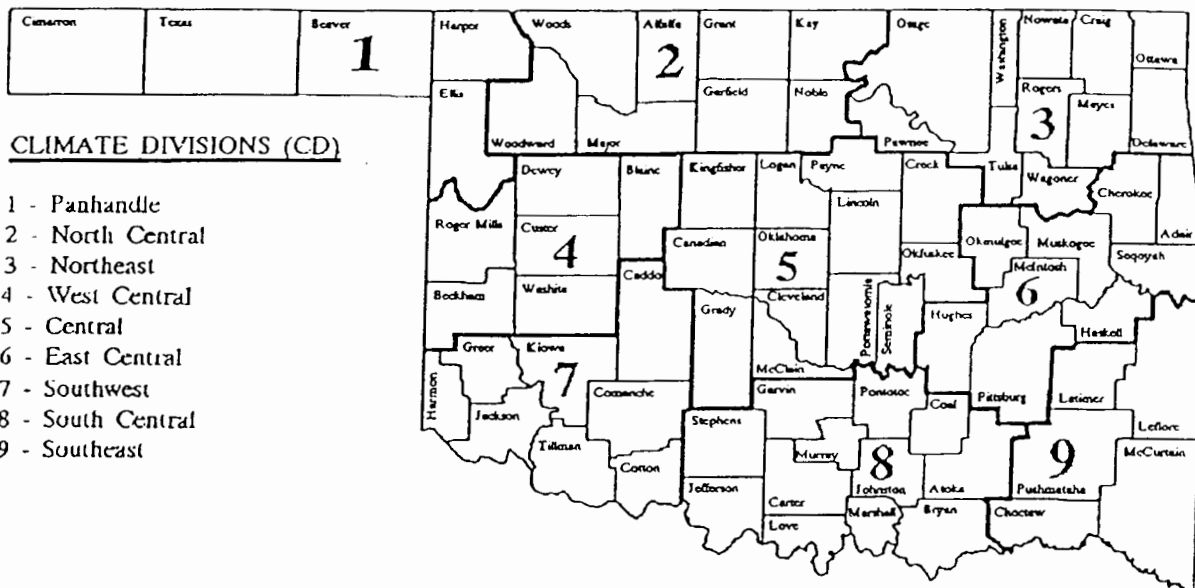

JANUARY NORMAL MONTHLY PRECIPITATION (inches)

OUTLOOK FOR JANUARY THROUGH MARCH 1998

BASED ON SEASONAL OUTLOOKS PROVIDED BY THE CLIMATE PREDICTION CENTER

TEMPERATURE: Near Normal Statewide

**PRECIPITATION: Greater Than Normal Western Two-Thirds
Near Normal Elsewhere**

CLIMATE DIVISIONS (CD)

- 1 - Panhandle
- 2 - North Central
- 3 - Northeast
- 4 - West Central
- 5 - Central
- 6 - East Central
- 7 - Southwest
- 8 - South Central
- 9 - Southeast

EXPLANATION OF TABLES

Two kinds of tables appear in this summary. The first is a set of tables containing all reporting stations grouped by climate division. The figure above shows the locations of the climate divisions. Each table contains the following information for each station:

- Station Name:
- Station Identification Number: These are usually assigned by the National Climatic Data Center.
- Climate Division: See the figure above.
- Number of Temperature Observations: These are the actual number of temperature reports recorded at the station during the current month. Missing observations may result in artificially high or low mean monthly temperatures.
- Deviation from Normal: The deviation of the observed mean monthly temperature from the monthly station normal. A positive value indicates the month was warmer than normal. A negative value indicates the month was cooler than normal. Normal monthly temperatures may be calculated by subtracting the deviation from the observed temperature.
- Maximum Daily Maximum: The maximum daily maximum temperature observed during the current month and year and the day which it occurred.
- Minimum Daily Minimum: The minimum daily minimum temperature observed during the current month and year and the day which it occurred.
- Heating Degree Days: HDD are calculated each day of the month for which there is a temperature report and the average temperature for the day is less than 65 degrees. Daily values are summed to arrive at a monthly total. They are a qualitative measure of how much heat was required to maintain a comfortable indoor temperature. Missing observations may result in an artificially high or low value. For February 1984 HDD would be calculated as:

$$\sum_{i=1}^{29} 65 - ((TMAX_i + TMIN_i) / 2)$$

Deviation from Normal Heating Degree Days: A positive value indicates higher than normal heating requirements for the month as a whole. A negative value indicates lower than normal heating requirements for the month as a whole. Normal HDD may be calculated by subtracting the deviation from observed HDD.

Cooling Degree Days: CDD are calculated each day of the month for which there is a temperature report and the average temperature for the day exceeds 65 degrees. Daily values are summed to give a monthly total. They are a proxy measure of how much cooling was required to maintain a comfortable indoor temperature. Missing observations may result in an artificially high or low value. For June, CDD would be calculated as:

$$\sum_{i=1}^{30} ((TMAX_i + TMIN_i) / 2) - 65$$

OKLAHOMA CITY CLIMATE CALENDAR

JANUARY

The data on this calendar are for Oklahoma City.
 Normal values are calculated for the period
 1961-1990. Extremes are found for the period
 of record (1891 - present).
